APP STORE LAUNCH GUIDE

Keith L. Odom App

Everything you need to publish the KLO app on **Google Play** and the **Apple App Store**

Prepared by Tim Adams • March 2026

OVERVIEW

What's Already Done

Tim has completed all development work. Here's what's ready to go.

✅

App Code

Full Next.js app wrapped in Capacitor for native iOS & Android

✅

App Icons

All icon sizes generated for both platforms

✅

Splash Screen

Dark branded launch screen configured

✅

Privacy Policy

Live at keithlodom.ai/privacy

✅

Terms of Service

Live at keithlodom.ai/terms

✅

Support Page

Live at keithlodom.ai/support

App ID: io.keithlodom.klo • **Version:** 1.0.0 • **Display Name:** KLO

YOUR ACTION ITEMS

What You (Keith) Need To Do

Three things only you can do because they require your accounts and identity.

1

Deploy to AWS

Host the app on your AWS account so the native apps have a server to connect to.

- Use **AWS Amplify** (easiest) — connect the GitHub repo
- Point **keithlodom.ai** DNS to Amplify
- Set environment variables (use the one-time secret link Tim sent)

2

Provide Store Assets

Write the marketing copy and gather screenshots for both stores.

- App description (short + long)
- Screenshots (Tim can generate these)
- Feature graphic for Google Play
- App category selection

3

Submit for Review

Upload the builds Tim provides and submit through your developer accounts.

- Upload AAB to Google Play Console
- Upload via Xcode to App Store Connect
- Complete content rating questionnaires
- Set pricing (Free with in-app purchases)

STEP 1

Deploy to AWS Amplify

This is the server that powers the app. The native apps load from this URL.

1. Log in to **AWS Console** → search for **Amplify**
2. Click "New app" → "Host web app"
3. Connect your **GitHub** account and select the **Axtegrity/klo** repository
4. Select the **main** branch
5. Amplify auto-detects Next.js — accept the default build settings
6. Click "Save and deploy" — wait for the build to complete (~3-5 min)
7. Go to "Domain management" → add **keithlodom.ai**
8. Update your DNS to point to the Amplify URL (Amplify shows you exactly what records to add)

Environment Variables

In Amplify → App settings → Environment variables, add these:

```
NEXT_PUBLIC_SUPABASE_URL
NEXT_PUBLIC_SUPABASE_ANON_KEY
SUPABASE_SERVICE_ROLE_KEY
NEXTAUTH_SECRET
NEXTAUTH_URL *
NEXT_PUBLIC_APP_URL *
GOOGLE_CLIENT_ID
GOOGLE_CLIENT_SECRET
STRIPE_SECRET_KEY
STRIPE_WEBHOOK_SECRET
NEXT_PUBLIC_STRIPE_PUBLISHABLE_KEY
ANTHROPIC_API_KEY
RESEND_API_KEY
ADMIN_NOTIFICATION_EMAILS *
```

* Set NEXTAUTH_URL and NEXT_PUBLIC_APP_URL to your AWS domain (e.g. https://keithlodom.ai). Set ADMIN_NOTIFICATION_EMAILS to your email. All other values are in the one-time secret link Tim sent you.

STEP 2A

Google Play Store Submission

Publish the Android version of the KLO app.

1. Go to **play.google.com/console** — sign in with your developer account
2. Click "Create app" → Name: **Keith L. Odom**, English, App, Free
3. "Main store listing" → short desc, full desc, screenshots, feature graphic, icon (Tim provides all assets)
4. Complete "Content rating" — informational, no violence/gambling
5. "Target audience" → 18+ (not directed at children)
6. "App content" → privacy policy: **keithlodom.ai/privacy**
7. Production → "Create new release" → upload **.aab file** from Tim
8. Release notes: "Initial release of the Keith L. Odom app"
9. "Review release" → "Start rollout to Production"

Review Time

First submission: **3-7 days**
Updates: **1-3 days**

Category

Business or Education

Contact Details

Required by Google:

info@keithlodom.ai
keithlodom.ai

STEP 2B

Apple App Store Submission

Publish the iOS version of the KLO app.

1. Go to **appstoreconnect.apple.com** — sign in with your Apple Developer account
2. Click "+" → "New App" — iOS, Name: **Keith L. Odom**, Bundle ID: **io.keithlodom.klo**, SKU: **klo-app-001**
3. Register Bundle ID first in Certificates, Identifiers & Profiles
4. "App Information" — Privacy: **keithlodom.ai/privacy**, Support: **keithlodom.ai/support**, Category: Business
5. "1.0 Prepare for Submission" — upload screenshots (Tim provides at 6.7", 6.5", iPad sizes)
6. Add description, keywords, marketing URL
7. Under "Build" — select the build Tim uploaded via Xcode
8. "App Review Information" — note that guests join events without sign-in
9. Click "Submit for Review"

Review Time

First submission: **1-3 days**
90% within **24 hours**

Important

Tim needs temporary access to your Apple Developer account to upload the build, OR you can run the Xcode archive on a Mac.

Review Notes

Tell Apple that guests join events without sign-in — no demo account needed.

Suggested App Store Copy

Use this copy for both Google Play and App Store listings. Edit as you see fit.

Short Description (80 chars)

"Interactive event engagement tools from keynote speaker Keith L. Odom"

Full Description

The Keith L. Odom app brings interactive engagement to live events and conferences.

Attendees: Live polls • Real-time Q&A • Word clouds • Event listings
Organizers: Create polls • Moderate Q&A • Announcements • Analytics • Reports
Plus: Leadership assessments • AI coaching • Event booking

Keywords (Apple — 100 chars)

keynote,speaker,event,engagement,polls,leadership,conference,Q&A,audience,coaching

Category

Primary: Business | Secondary: Education

What's New (v1.0.0)

Initial release — live event engagement, leadership assessments, AI coaching, event booking.

Content Rating Answers

Violence: No • Sexual content: No • Language: No (filter active) • Gambling: No
User-generated content: Yes (Q&A, polls) • Accounts: Optional • In-app purchases: Yes

TIMELINE

Launch Timeline

1. **AWS Deployment** (Keith)
   Connect GitHub repo to AWS Amplify, set env vars, point DNS.
   ~1-2 hours

2. **Verify App Works** (Tim + Keith)
   Confirm keithlodom.ai loads correctly from AWS. Test all features.
   ~30 minutes

3. **Build Native Apps** (Tim)
   Generate signed Android AAB and iOS archive. Generate store screenshots.
   ~1-2 hours

4. **Submit to Stores** (Keith, guided by Tim)
   Upload builds, fill in store listings, submit for review.
   ~1-2 hours

5. **Review Period** (Waiting)
   Google: 3-7 days for first app. Apple: usually within 24 hours.
   1-7 days

6. **Go Live!** (Automatic)
   Once approved, the app appears in both stores. Share the links!
   Immediate after approval

Total estimated time: 1-2 days of work + up to 7 days review

QUICK REFERENCE

Key Details At a Glance

App Details

App Name	**Keith L. Odom**
Display Name	KLO
Bundle ID	`io.keithlodom.klo`
Version	1.0.0
Pricing	Free (with in-app purchases)
Category	Business / Education

URLs (Live Now)

Website	keithlodom.ai
Privacy Policy	keithlodom.ai/privacy
Terms	keithlodom.ai/terms
Support	keithlodom.ai/support
Contact	info@keithlodom.ai

Who Does What

Keith	Tim
AWS Amplify setup	Build signed apps
DNS configuration	Generate screenshots
Set environment vars	Env values sent (one-time link)
Store submissions	Upload iOS build (needs access)
Review responses	Bug fixes if rejected
Approve descriptions	Provide store copy

Next Step

Keith: GitHub repo is transferred to your account (**Axtegrity/klo**). Env values sent via one-time secret. Set up AWS Amplify and let Tim know when **keithlodom.ai** is loading from AWS.

Tim will then build the native apps, generate
