Admin Guide

# Push Notifications

KLO Advisory Platform

How to send push notifications from the admin dashboard, the mobile app, and via automated triggers.

Prepared for Keith Odom

March 2026

# Overview

What push notifications are and how they work in KLO

---

Your KLO app supports push notifications across **web browsers**, **iOS**, and **Android**. Users opt in from their Profile Settings, and you can send notifications from the Admin Dashboard.

Push notifications are messages that appear on a user's device even when they're not actively using your app — banners on phones, pop-ups on desktop. Users must grant permission before receiving them.

## Three Ways to Send

| METHOD | WHERE | BEST FOR |
|---|---|---|
| **Admin Dashboard** | keithlodom.ai/admin → Notifications tab | Announcements, new content, event reminders |
| **Mobile App** | Admin section within the iOS/Android app | Quick sends on the go from your phone |
| **Automated** | Fires automatically (no action needed) | Subscription confirmed, assessment done, payment failed |

**Supported Platforms**

Chrome, Edge, Firefox, Safari 16.4+, iOS app, Android app. A single user can subscribe on multiple devices — they'll receive notifications on all of them.

# Method 1: Admin Dashboard

Send from your computer at keithlodom.ai/admin

DESKTOP / LAPTOP

## Getting There

Open your browser, sign in as admin, and navigate to the Notifications tab.

1. **Sign in at keithlodom.ai**
   Use your admin credentials (owner or admin role required)

2. **Go to /admin**
   Click "Admin" in the navigation or go directly to `keithlodom.ai/admin`

3. **Click the "Notifications" tab**
   You'll see subscriber stats, the compose form, and a list of all subscribers

## Sending a Broadcast (All Users)

1. **Select "Broadcast to All"**
   This is the default. Every subscribed user on every device will receive it.

2. **Fill in the notification**
   **Title:** Short & punchy, under 50 characters (bold headline on the device)
   **Body:** 1-2 sentences. Be clear and actionable.
   **Link URL:** Where they go when they tap. Use paths like `/vault`, `/assessments`, `/booking`

3

**Click "Send Notification"**

A green banner confirms how many devices received it.

# Method 1: Admin Dashboard (cont.)

Targeting a specific user instead of everyone

## Sending to a Specific User

Use this when a notification is relevant to only one person.

1. **Click "Specific User" (instead of "Broadcast to All")**
   A new "User ID" field will appear in the form.

2. **Find the User ID**
   Switch to the **Users** tab in the admin dashboard. Each user row has a UUID — copy it.

3. **Paste the User ID, compose your message, and send**
   Only that user's devices will receive the notification.

## Understanding Subscriber Stats

At the top of the Notifications tab you'll see four stat cards:

| STAT | WHAT IT MEANS |
|---|---|
| **Total Subscribers** | Total device subscriptions across all platforms |
| **Web Push** | Users subscribed via Chrome, Safari, Edge, or Firefox |
| **iOS** | Users subscribed via the KLO iPhone/iPad app |
| **Android** | Users subscribed via the KLO Android app |

**One User, Multiple Devices**

If someone subscribes on both their phone and laptop, they count as 2 subscriptions but are still 1 user. Broadcasts reach all their devices.

# Method 2: From the Mobile App

Send push notifications directly from your iPhone or Android

IOS / ANDROID

## Sending from Your Phone

The admin dashboard works in the KLO mobile app too — same features, optimized for touch.

1. **Open the KLO app on your phone**
   Make sure you're signed in with your admin account.

2. **Navigate to Admin → Notifications tab**
   The admin dashboard is fully responsive. Tap the "Notifications" tab just like on desktop.

3. **Choose broadcast or specific user**
   Tap "Broadcast to All" or "Specific User" — same options as desktop.

4. **Fill in Title, Body, and Link URL**
   Compose your notification. Keep the title short since you're typing on mobile.

5. **Tap "Send Notification"**
   You'll see the green confirmation with delivery count.

**Pro Tip: Quick Sends on the Go**

This is perfect for time-sensitive notifications like "Session starting in 10 minutes!" or "New framework just dropped" — no need to get to a computer. The mobile app uses the same API, so everything works identically.

**Who Can Send from Mobile?**

Only users with

**owner**

or

**admin**

roles can access the Notifications tab and send push notifications. Regular users won't see it.

# Method 3: Automated Notifications

These fire automatically — no action needed from you

AUTOMATIC

## Built-In Triggers

The system sends these to the user who triggered the event. You still get email notifications for admin-relevant events.

| WHEN THIS HAPPENS | USER SEES THIS | TAPS TO |
|---|---|---|
| **User subscribes**<br>Completes Stripe checkout | **"Welcome to KLO Pro!"**<br>Your subscription is active. Explore your new features now. | `/vault` |
| **Payment fails**<br>Stripe can't charge card | **"Payment Issue"**<br>We couldn't process your payment. Please update your payment method. | `/profile` |
| **Assessment done**<br>User completes any assessment | **"Assessment Complete!"**<br>You scored 72% on Church AI Readiness. View your results. | `/profile` |

**These Go to the User, Not You**

When someone completes an assessment, *they* get the push notification. You still get the admin email notification as before — nothing changes on your end.

## Future Triggers (Can Be Added)

New vault content published → notify all subscribers

Booking confirmed → notify the user

Conference session starting soon → notify attendees

Weekly engagement digest → nudge inactive users

# How Users Subscribe

What your users need to do to start receiving notifications

WEB BROWSER

## Subscribing on Desktop / Laptop

Works in Chrome, Edge, Firefox, and Safari 16.4+

1. **Go to Profile → Settings**
   The "Push Notifications" toggle is under Notification Preferences.

2. **Toggle on Push Notifications**
   The browser shows a permission prompt: "keithlodom.ai wants to send notifications."

3. **Click "Allow"**
   Done! The toggle turns blue. They'll now receive push notifications in their browser.

IOS / ANDROID APP

## Subscribing on Mobile

The app handles most of this automatically

1. **App prompts on first launch**
   When a user first opens the KLO app, it automatically asks for push notification permission. If they tap "Allow", they're subscribed immediately.

2

**Can also toggle in Profile → Settings**

Same toggle as web. If they declined the initial prompt, they can enable it here (the app will re-prompt for permission).

### If a User Blocked Notifications

If someone previously tapped "Don't Allow" (iOS) or "Block" (browser), they need to fix it in their device settings:

**iPhone:**

Settings → KLO → Notifications → Allow Notifications

**Chrome:**

Click lock icon in address bar → Site Settings → Notifications → Allow

# Unsubscribing & Best Practices

How users opt out, and how to keep engagement high

## Unsubscribing

Users can toggle off push notifications from their Profile → Settings at any time. This immediately removes their subscription from the server. They stop receiving notifications on that device right away.

## Best Practices

**DO**

- ✓ Keep titles under 50 characters
- ✓ Make the body actionable
- ✓ Always include a link URL
- ✓ Send 1-3x per week max
- ✓ Send during business hours (Tue-Thu is best)
- ✓ Target specific users when relevant

**DON'T**

- ✗ Send more than once a day
- ✗ Use ALL CAPS or clickbait
- ✗ Send without a clear purpose
- ✗ Send late at night
- ✗ Send the same message twice
- ✗ Forget to test on your own device first

## Ready-to-Use Templates

| USE CASE | TITLE | BODY | LINK |
|---|---|---|---|
| New content | New in the Vault | The [Name] framework is now available. | /vault |
| Event | Event Tomorrow | [Event] starts at [time]. Don't miss it! | /events |
| Feature | New Feature | Strategy Rooms are live! Collaborate in real time. | /strategy-rooms |

| USE CASE | TITLE | BODY | LINK |
| --- | --- | --- | --- |
| Nudge | Track Your Progress | It's been a while. See how you've grown. | /assessments |

# Technical Reference

For developers and technical team members

## API Endpoints

| ENDPOINT | METHOD | AUTH | PURPOSE |
|---|---|---|---|
| `/api/push/subscribe` | POST | User | Register a push subscription |
| `/api/push/unsubscribe` | DELETE | User | Remove a push subscription |
| `/api/push/send` | POST | Admin | Send notification (broadcast or targeted) |
| `/api/push/subscribers` | GET | Admin | List all subscribers with stats |

## Send API — Request Examples

```
// Broadcast to all subscribers
{
  "title": "New Framework Available",
  "body": "Check out the AI Ethics Framework.",
  "url": "/vault"
}

// Send to one specific user
{
  "title": "Your Report is Ready",
  "body": "View your AI readiness report.",
  "userId": "user-uuid-here"
}

// Send to multiple specific users
{
  "title": "Pro Members Only",
  "body": "Exclusive content just dropped.",
  "userIds": ["uuid-1", "uuid-2"]
}
```
